

**R-2002 G****Self Adhesive Waterproofing Membrane**

Cold applied, self adhesive, SBS modified bituminous sheet with high tack resins and triple laminated high density polyethylene film on the top surface which gives the membrane excellent adherence and excellent mechanical strength. It is fully bonded recognized as the surest and most rational sealing form against water under pressure and proof to weather and atmospheric influences, ideal for below grade waterproofing structural concrete like basement, foundations, retaining walls, ground slabs, beam tunnels, reinforced concrete roofs and lift pits.
